Gaps between primes and some conjectures of Erdös

János Pintz

Alfréd Rényi Mathematical Institute, Hungarian Academy of Sciences, Hungary
pintz.janos@renyi.mta.hu

Session: 1. Analytic Number Theory

In the lecture I plan to talk about some results on gaps between primes, including several old conjectures of Erdős, whose proof uses the methods of Zhang or Maynard-Tao, but which are not direct consequences of the known breakthrough results on bounded gaps between primes.
